OBJECTIVE

Third-year B.Tech Computer Science student at Thapar University with hands-on experience in machine learning, RAG pipelines, and building multi-agent AI systems. Seeking an **AI Engineering Internship** to apply technical skills in agentic workflows and LLM applications within a collaborative, product-driven engineering team.

EDUCATION

Thapar University

2024 – 2028

B.Tech in Computer Science | GPA: 8.23

TECHNICAL SKILLS

Languages: Python, C++, SQL

Frameworks & Tools: TensorFlow, PyTorch, XGBoost, Scikit-learn, FastAPI, Pydantic, Streamlit, Gradio, LangChain, LangGraph, ChromaDB, Pinecone, Hugging Face Spaces, GitHub Pages

Concepts: Machine Learning, Deep Learning, LLMs, RAG, Agentic AI, Multi-Agent Systems, Prompt Engineering, Computer Vision, REST APIs, Asynchronous Programming, OOP, Backend Web Development

PROJECTS

AI Research Agent

Built a LangGraph-based research agent that takes a user-provided topic, autonomously plans and runs web searches via the Tavily API, and synthesizes the findings into a structured report.

RAG-Based Document Q&A Assistant

Built and deployed a Retrieval-Augmented Generation app on Streamlit Cloud that answers questions over user-uploaded documents, using LangChain, Hugging Face embeddings, a vector store, and the Gemini API for grounded response generation.

Movie Recommendation System

Built a movie recommendation engine that suggests titles to users based on their preferences and viewing history.

Water Risk Intelligence System (Ranked in Top 10 in International Hackathon)

Built a dashboard forecasting water contamination risk 3 hours ahead using real-time sensor data for river monitoring.

Paddy Disease Classifier — Kaggle Competition

Developed a deep learning image classification model to detect and classify rice paddy leaf diseases.

EXPERIENCE

Founder, E-commerce Ventures

June 2025- Dec 2025

Launched and managed two online stores — home decor lighting (dropshipping) and customizable luggage covers — handling sourcing, storefront setup, and marketing.

Founder, Cold Outreach Agent (Working Prototype)

August 2026- Present

Building a LangGraph-based multi-agent system that automates personalized cold outreach — combining Tavily web search, the Gmail API, Google Sheets, and RAG over a candidate CV to research recipients and draft tailored messages. Core pipeline is built and working end-to-end as a prototype; refining reliability and output quality ahead of a full rollout.

EXTRACURRICULAR

Vice-Proctor, Hostel — Thapar University

Elected to a student leadership role responsible for maintaining hostel discipline, coordinating resident welfare, and liaising between students and administration.
